

Piping Stress Analysis of Refrigeration Propane Storage Facility

(CAESAR II, Navisworks)

Key Features

Technology:

CAESAR II

Navisworks

MS Office

Duration:

The project was completed in 1.5 months

Deliverables:

1. CAESAR II (.c2) File
2. CAESAR II Output Report
3. Isometrics support markup

The Client

A leader in engineering and design providing services to the petrochemical industry. Their experienced technical team leveraged industry knowledge to efficiently define, design, and execute engineering projects.

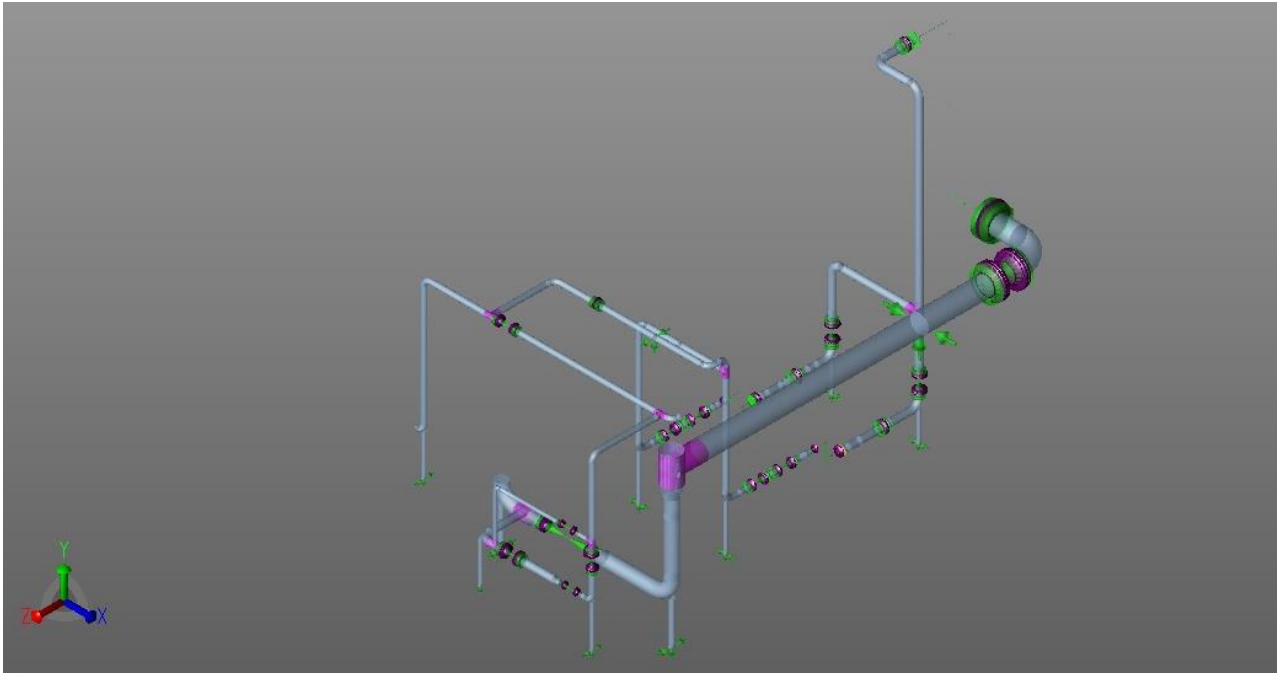

The Business Need

The client required piping stress analysis of Refrigeration Propane storage facility that contained 20 systems including 108 lines.

Rishabh's Solution

Rishabh's Engineering completed the piping stress analysis of Refrigeration Propane storage facility in 1.5 months with a team of 7 members including 1 team leader.

ASME B31.3 codes and standards were followed to ensure higher quality in delivering piping stress analysis.

Technology Used

- Stress Analysis Software – Intergraph CAESAR II
- Review Software- Navisworks
- MS office

Key Deliverables

- CAESAR II (.c2) File
- CAESAR II output report
- Isometrics support markup
